Unanet Technologies and Planet Computer Announce Partnership

Unanet - Products to manage your e-business
Unanet Technologies (http://www.unanet.com) and Planet Computer (http://www.planetuplink.com) announce a co-marketing agreement to bring Unanet web-based time and attendance, expense reporting, and project collaboration to companies requiring hosted services.

Planet Computer is an ASP (Application Service Provider) and offers an Internet-based hosting service, PlanetUplink, which allows simultaneous access to company data anywhere and anytime. The Hosting service frees a company from acquiring captial-intensive computer and communications equipment, hiring and maintaining technology employees, and spending management effort. Adding the Unanet web-based suite of products simplifies the installation and maintenance at the client computers for time, expense and project tracking capabilities. Using only a browser on Macs, PCs or Unix clients, people can enter and retrieve data in real time.

"Planet Computer deploys high quality IBM thin computing products to the customer, greatly reducing initial hardware investment costs. IBM thin clients bundled with Unanet's software hosted on PlanetUplink, creates a full IT Management solution for our rapidly growing customer base," explains Cori Fountain, CEO of Planet Computer. "

"Planet Computer extends our ability to provide our web-based advanced technology products to a wider audience," said Fran Craig, CEO and President of Unanet Technologies. "Each company can focus on its core competencies. As a technology company, Unanet adapts leading-edge technologies into e-business products that increase value for our customers. As a hosting service company, Planet Computer can provide the computer, communications and workforce capabilities."

About Planet Computer

Planet Computer has focused efforts on its application hosting service, known as PlanetUplink. This ASP service allows users to access their business applications through a secure Internet connection, on a familiar and easy to use, Windows NT virtual desktop. Customers can simultaneously
access email, the Internet, and virtually any office suite or database from Planet Computer's secure server farm. The cost includes a setup fee and monthly subscriber fee. Visit www.planetuplink.com or contact sales@planetcomputer.net for additional information.

About Unanet Technologies

Unanet Technologies based in Fairfax, Virginia is an Information Technology (IT) company adapting leading-edge technologies into e-business products to increase customer value. Unanet's best-of-breed timesheet, expense report and project tracking are proven software in production for over two years. Purely web-based and vendor-independent, Unanet is a unique set of IT management tools for enhancing the business productivity of today's workforce, which is often dispersed, high-tech, and has an insatiable appetite for information. By leveraging the Web, Unanet products increase revenues, decrease costs, and enhance collaboration and knowledge management. Unanet customers include
